

TANK FABRICATION & INSTALLATION

The PSS Tank Lining division provides our customers with the latest technology for their Food Grade commodity storage & process vessels.

ASEPTIC FRUIT JUICE TANK FABRICATION & INSTALLATION **THE ENTIRE PROCESS**

Our company has the ability to help in every step of a Juice facility build out – from design to first pour. Our team works with trusted vendors to procure the necessary equipment within any budget to realize a truly unique facility design. During project development, our trained technicians install any and all equipment including Tanks, steam systems, glycol systems, Cooler Equipment and much more.

SKILLED CRAFTSMEN **OUR SUCCESS**

Our understanding of Food Grade process piping & sanitary piping with stainless steel separates us from a normal mechanical contractor. Hygienic, resistant to corrosion, and strong. These are the obvious benefits to using stainless steel in the brewing, fermentation, and bottling of beer. We know stainless steel well and will ensure that the welding does not cause small imperfections that can become a crevice or pit where bacteria will hideout. This careful attention to detail ensures the finished product tastes fresh.

BREWERY & WINERY PROCESS PIPE / TANK FABRICATION & INSTALLATION

Tank installs are challenging, but not for the experts at PSS. From disassembly to alignment, leveling, and anchoring, we execute every step safely—ensuring a smooth, quality install. PSS's record of safety and successful projects stems from our process and expertise. We deliver an end-to-end solution for your install. We offer single-source self-performance for every phase of the project — including demolition, concrete installation, and steel erection. Trust us to safely execute your next tank install or modification.
